Style Guide
Create 3-5 wireframe sketches with grids by only using the blocking method. Must use the final format size. Show examples in full size if possible, on black, no other type or information on screen. Show with and without grids. Grid to include, Column, Rows, Modules, and definition of why you chose this grid. Which constraint helped you set this grid?
I divided the columns into three and then used the grid to align that. This was the easiest of them all.
Wireframe 2
I had to fool around with a variety of grids until this one gave me what I was looking for. I wanted to divide it in thirds, but also quarters. This allowed me to align the buttons on the bottom, as well as the icons at the top of the grid.
This grid had the most components and was hardest to do. I tried doing various alignments of rows, and 15 rows was the closest to what I wanted. I then used 5 columns since it aligned closest to the distance I was looking for and allowed me to align everything.
