Create 3-5 wireframe sketches with grids by only using the blocking method. Must use the final format size. Show examples in full size if possible, on black, no other type or information on screen. Show with and without grids. Grid to include, Column, Rows, Modules, and definition of why you chose this grid. Which constraint helped you set this grid?
I have a large photo emphasized front and center with additional text and information on the bottom. A choice to vote up or down the image is on the bottom with easy button access to the user.
I have a large photo emphasized front and center with additional text and information on the bottom. The text is presented differently with the larger category to the left and the details to the right. There are three navigational buttons on the bottom instead, and the informational button is moved underneath the photo.
Wireframe 3

I have a large photo emphasized front and center with additional text and information below the photo. There is also an additional photo presented in a circle on the bottom right and some key information presented in a rectangle on the bottom left of the image. There are only sparse details below the photo before a new photo is presented again.
