Time Series

Definition

A *time series* is a sequence of data points, measured typically at successive points in time spaced at uniform time intervals.

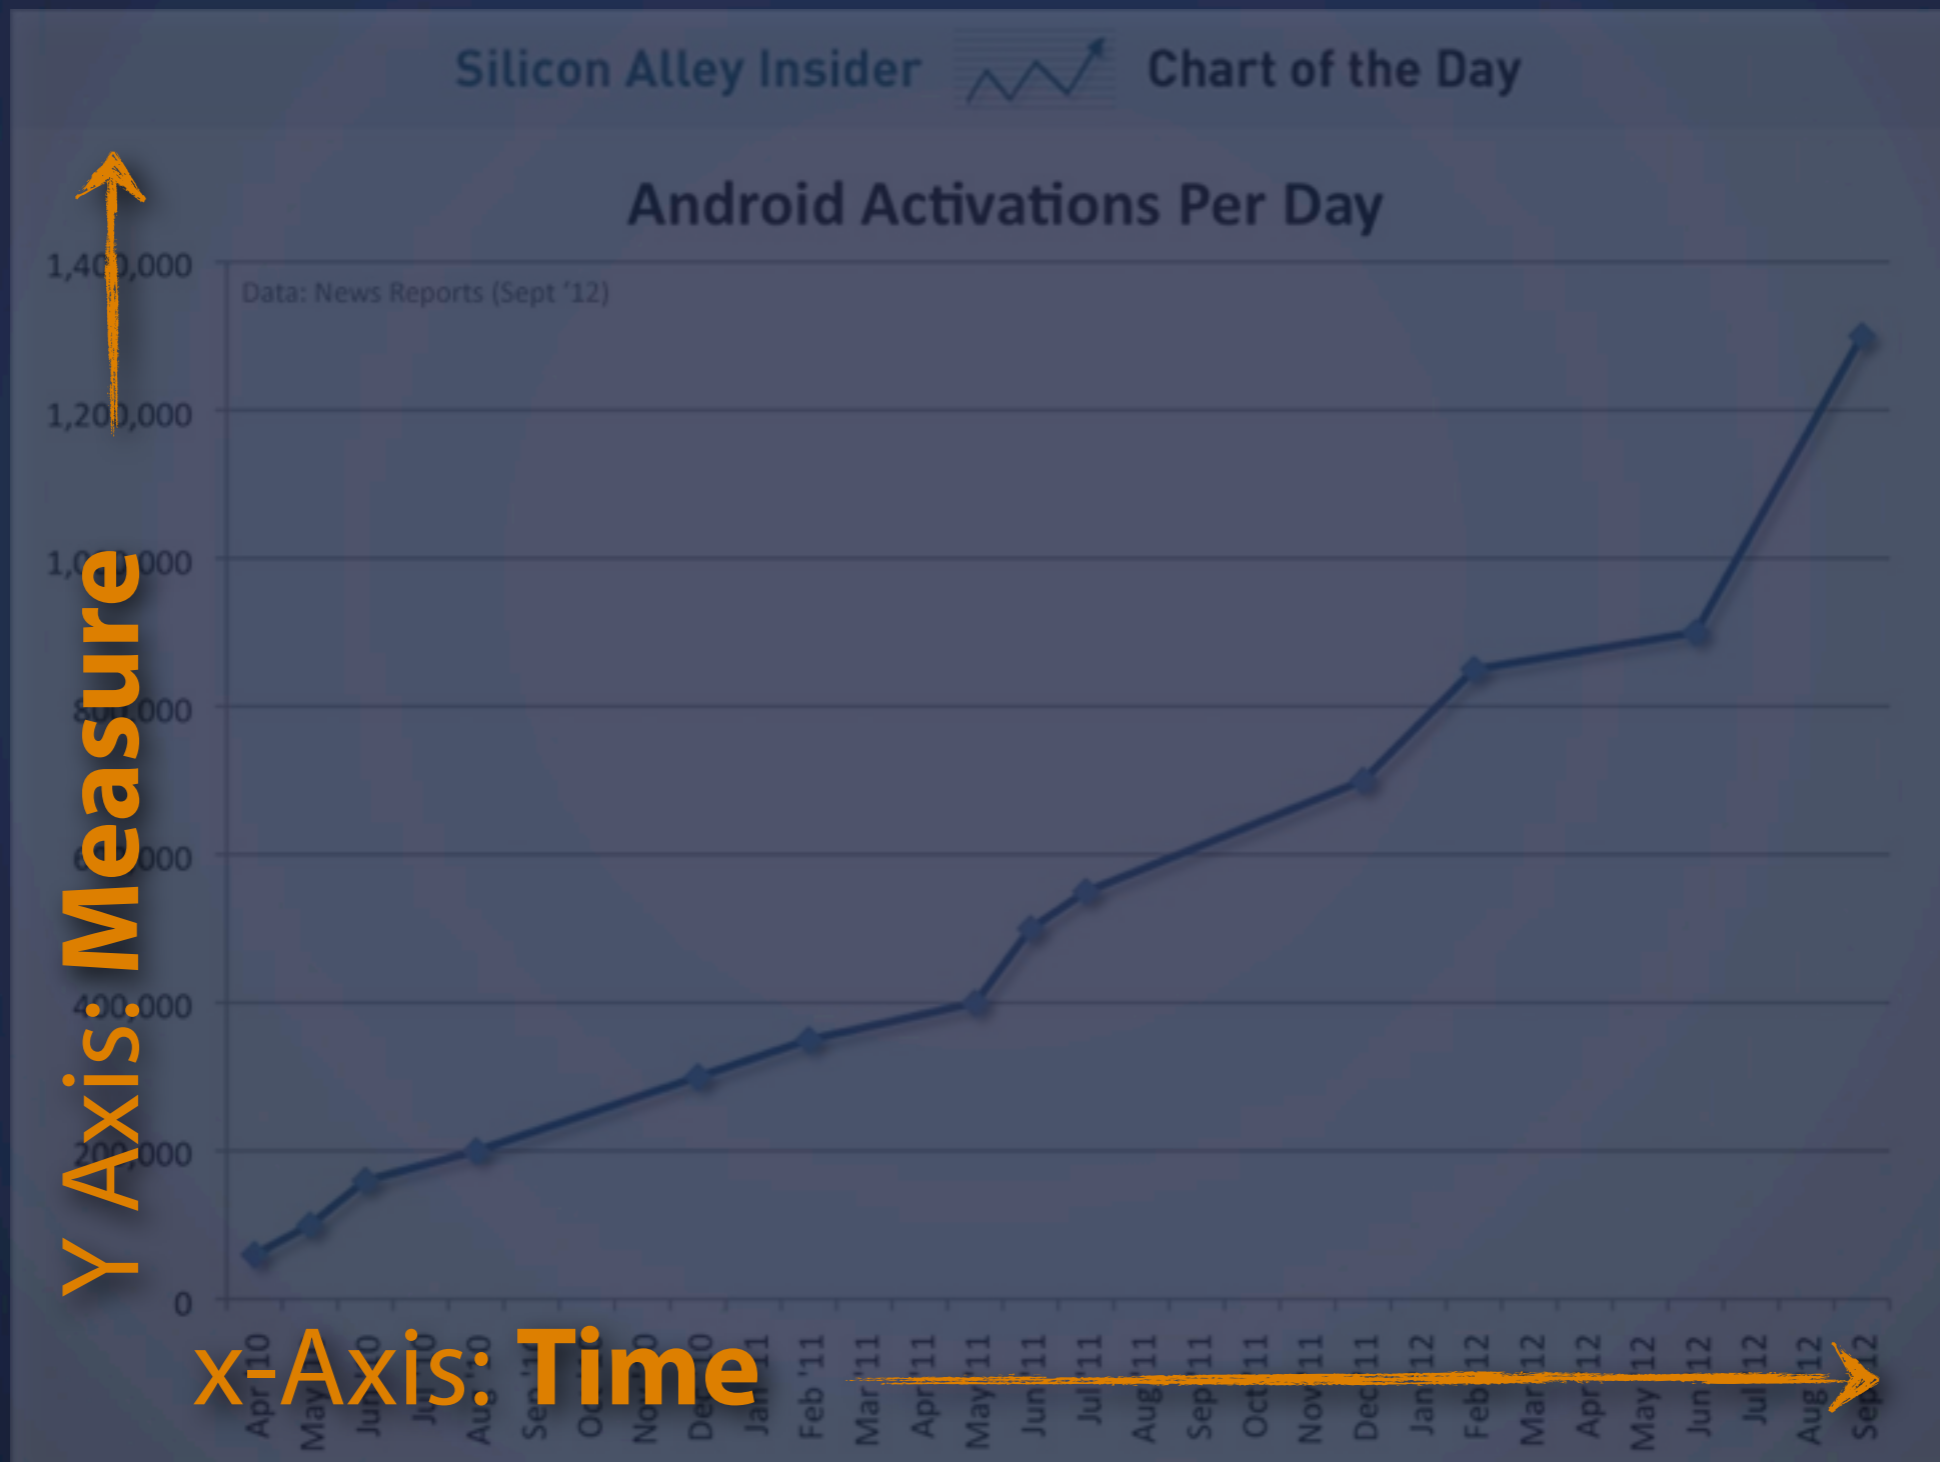

Time Series: Example

Android Activations per day, measured on the first of each month

Time Series: Example

Android Activations per day, measured on the first of each month

Task / Objective

Is there a periodic pattern?

What's the pattern?

What other tasks?

**What is the reader's task when looking at a
visualization of time series data?**

Tasks

Whole time series

- When was something at **min/max**?
- Is there a **pattern**?
- Do any of the series **match a pattern**?
- Two series **similar**?

Tasks

Individual data elements

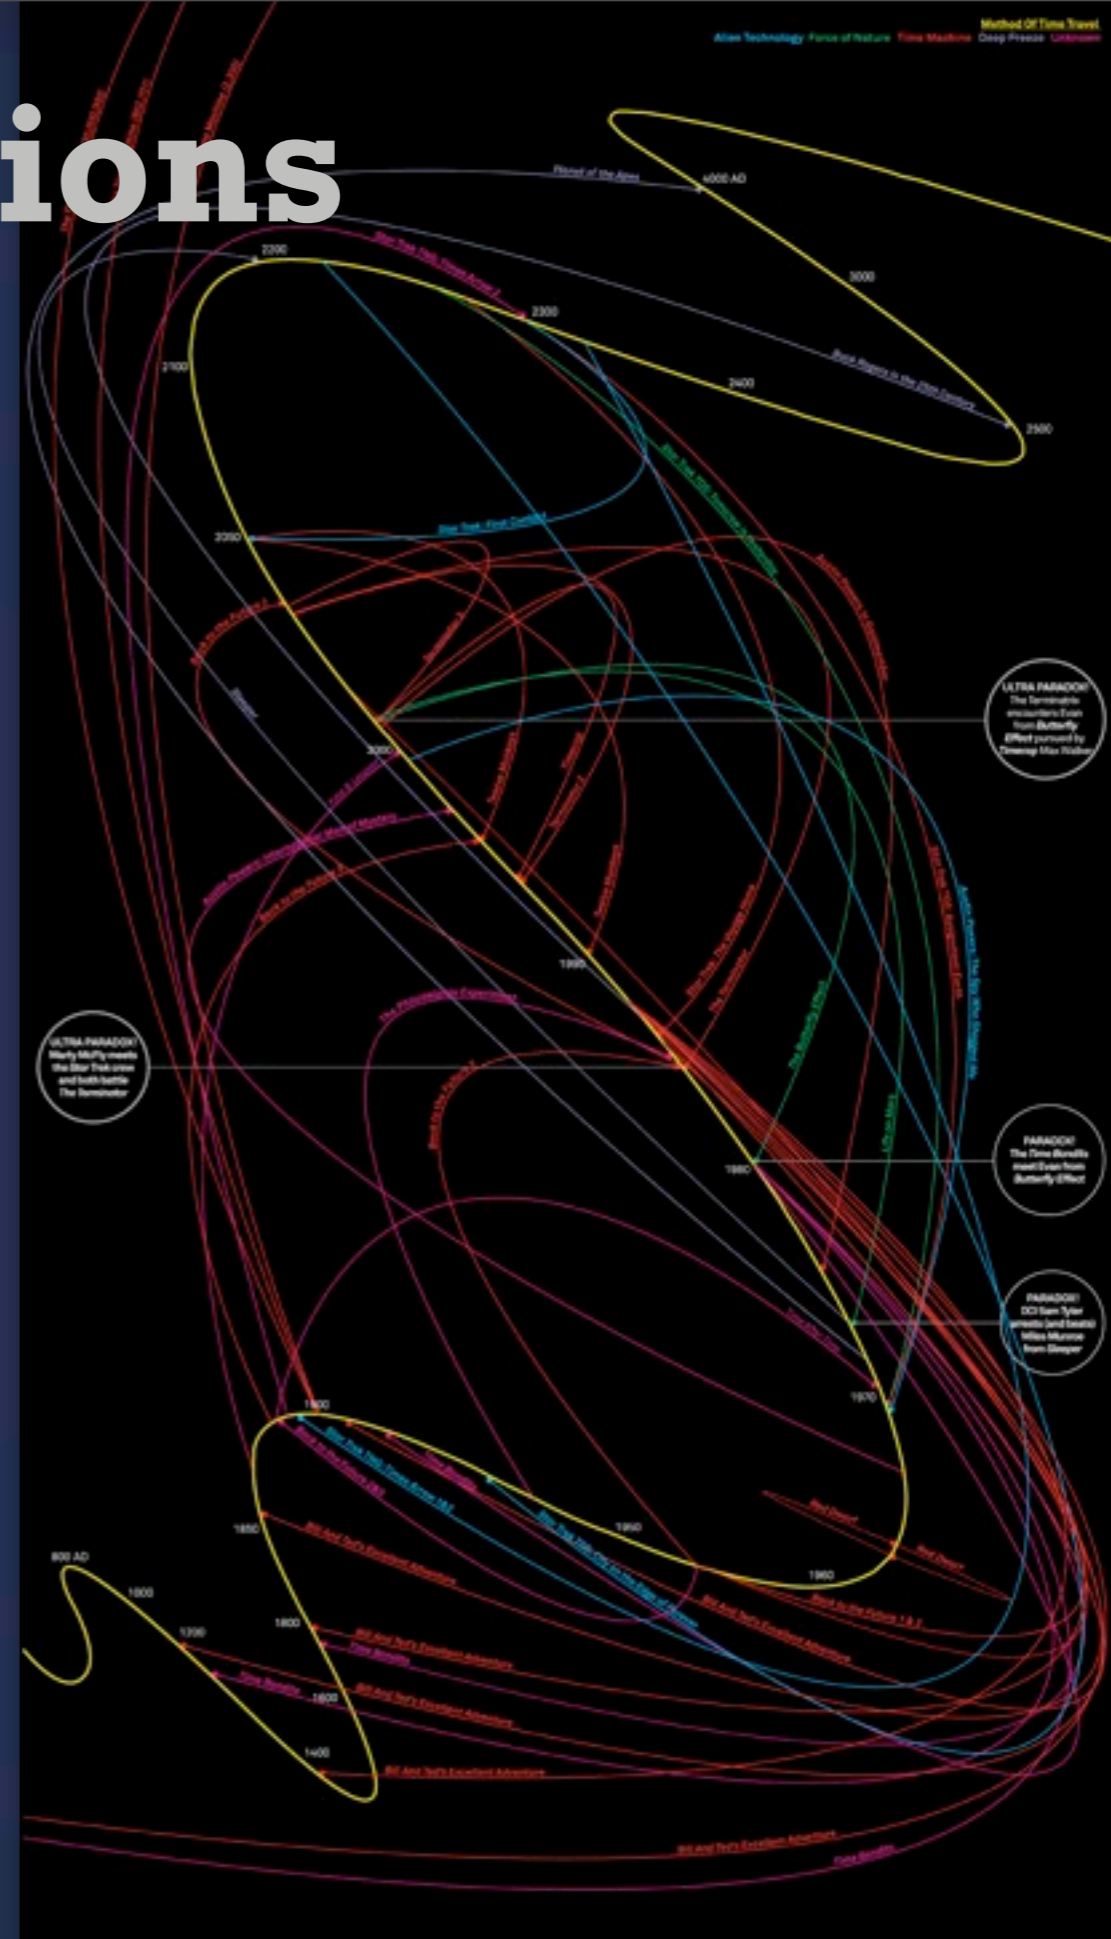

- Does a data element **exist** at t ?
- **When** does a data element exist?
- **How long** does it exist?
- **How often** does it exist?
- **How fast** is the data changing?
- In **what order** do data elements appear?
- Do data elements **exist together**?
